

- Screenshot of w3 markup validation report

The screenshot shows the Nu HTML Checker interface. At the top, it says "Nu Html Checker". Below that, a note states: "This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change". The main heading is "Showing results for https://nkazimi.github.io/lab2/". Under "Checker Input", there are checkboxes for "source", "outline", and "image report", along with an "Options..." button. The "Check by" dropdown is set to "address", and the URL "https://nkazimi.github.io/lab2/" is entered in the text box. A "Check" button is at the bottom of the input section. Below the input section, a message says: "Use the Message Filtering button below to hide/show particular messages, and to see total counts of errors and warnings." There is a "Message Filtering" button. The results section shows a single warning: "Warning Consider adding a lang attribute to the html start tag to declare the language of this document." It provides details: "From line 1, column 16; to line 2, column 6" and shows the code snippet: "TYPE html><html> <he". It also includes links for further guidance: "Declaring the overall language of a page" and "Choosing language tags". At the bottom of the results section, it says: "If the HTML checker has misidentified the language of this document, please file an issue report or send e-mail to report the problem." Below the results, a blue bar indicates "Document checking completed." and a note says: "Used the HTML parser. Externally specified character encoding was utf-8. Total execution time 64 milliseconds." At the very bottom, there are links: "About this checker", "Report an issue", and "Version: 21.1.13".
